

### **Friends and Neighbors –**

One of the most consequential and harmful lies that has been spread over the last several decades is the lie of human-caused global warming.

The effort has spread beyond a simple word of caution for humanity, misplaced though it was. It has evolved into an effort to control virtually every aspect of our lives – from the energy we use, to the food we eat, to the cars we drive. They even want to control the types of lawn equipment and water bottles we can use.

Those who dare to call out the mainstream narrative for what it is - a myth - are ostracized and canceled.

**But facts are facts, and this terrific video explains the reality of what we are experiencing:**

The Earth's climate is getting colder and dryer due to natural cycles driven by the sun.

Researchers analyzed climate going back to 600 BC and identified cycles of 100, 170, 515,

and 1030 years. They predicted extreme weather around the year 2000, followed by a cold turn and drought, which is what we are seeing currently.

The sun is the main driver of our climate, we cannot change that. If you want to know the future, look to the past. It is much more instructive than computer models.

Unfortunately, Global warming is a lucrative industry. Politicians and interest groups will continue to exploit the global warming narrative to further their agendas, manipulate public opinion, and exert control. Powerful interests have a stake in elevating the global warming myth and suppressing dissenting voices. We must continue to fight back and spread the message of truth.
